

## AIT Grid 20" x 9" Air Injection Technology Assembly Guide

Designed for use with a dual outlet air pump.

- 4—8" lines
- 4—3 3/4" lines
- 10—3 1/2" lines
- 10—micro tee's
- 4—elbows
- 22—weights

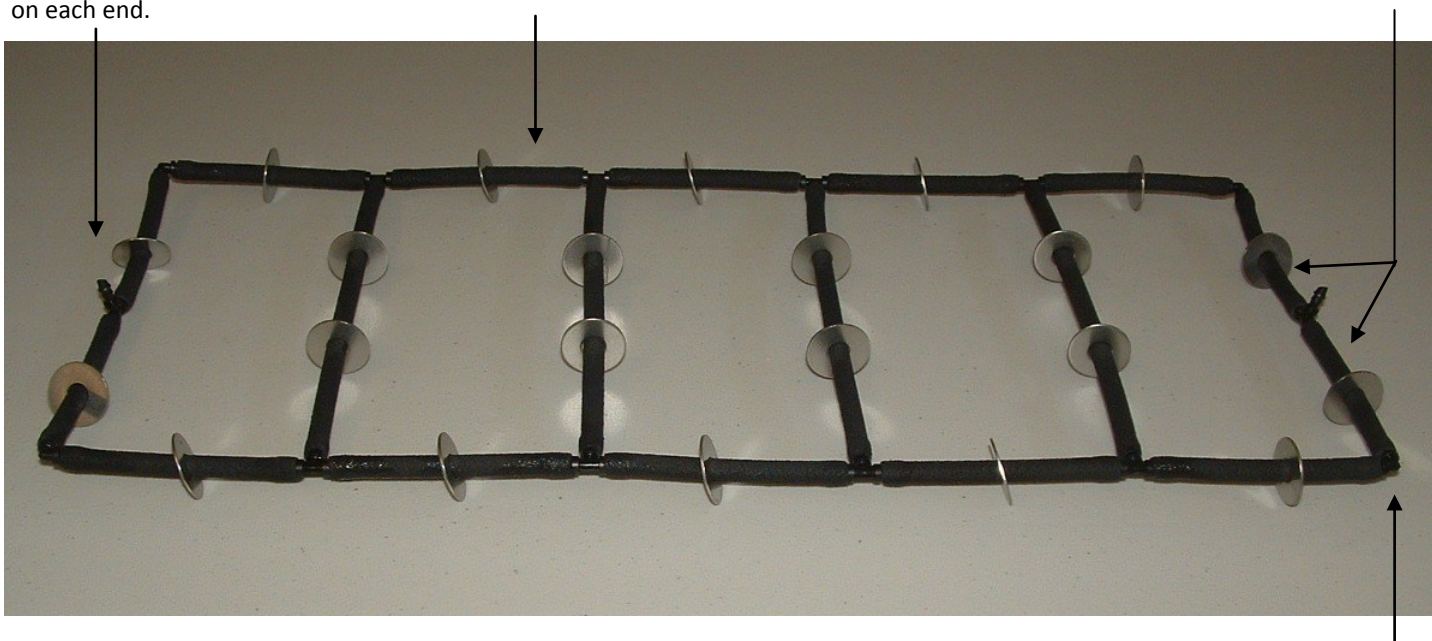

Designed to be used with a dual outlet air pump. The AIT Grid supplies consistent air injection through out the entire 20" x 9". Fits nicely in a standard 20" x 10" propagation tray, or can be used in a water reservoir to supply huge amounts of air to your plants.

2—tee's to air pump. 1—  
on each end.

10—3 1/2" lines, 5 on each side.

4—3 3/4" lines, 2 on each end.

Note: Every where there is a line there is a weight. The 4 eight inch lines in the center get two weights on each line.

4—elbows, one on each corner.

**Helpful Hint:** Heat up the lines with a hair dryer, makes it easy to insert the micro tee's and elbows.
